## Military Culture Workshop:

Tulsa, Oklahoma, November 30, 2012 —

The Community Service Council (CSC) has a long tradition of addressing issues related to the needs of veterans. As part of this initiative, the CSC is sponsoring trainings focused on the facilitation of Military Culture Training and Cognitive Processing Therapy (CPT) to better meet the needs of service member populations and other groups affected by trauma in our community.

**Join us for the second training in this series on Military Culture, provided by Dr. Harold Kudler, from Durham VA Medical Center and Duke University.**

This presentation is open to all interested individuals. The purpose is to increase practical information about military culture and the needs and concerns of new combat veterans and their families. Emphasis will be placed on posttraumatic stress disorder (PTSD), traumatic brain injury (TBI), and the respective issues facing Active Duty and Reserve Component members and their families in the course of the deployment cycle.
